

COSMETIC ROLL-CIT™

Collagen Channeling for Natural Collagen Induction Therapy

The Environ® Cosmetic Roll-Cit™ is the latest revolutionary design from Environ® in skin care treatments.

It is a world first and will dramatically increase the effectiveness of skin care products, allowing improved penetration of vitamins into the active layers of the skin.

The principle of the Cosmetic Roll-Cit™ is that the “micro-needles” puncture the horny layer of the epidermis, which is the main obstruction to penetration of active ingredients. Once this layer has been breached, the active ingredients in the skin care products can reach into the depths of the skin about 10,000 times more effectively than by simply applying the products topically. The higher the levels of vitamin A and vitamin C that can penetrate into the lower layers of the epidermis, the more collagen can be made. Therefore allowing natural collagenesis to occur.

Use of the Cosmetic ROLL-CIT™ will help restore skin tightness in the early stages of ageing, speed up the reduction of pigmented marks, thicken thin skin, smooth fine lines, soften scars and reduce dilated blood vessels. The advantages of skin needling is that is not painful, it does not damage the skin and it can be used on all areas of the skin or body, including very thin skin. It is however, not suitable for use on the following skin conditions: Active acne, Eczema, Rosacea, Psoriasis, severe solar keratosis and raised moles or warts.

The treatment time can range from 5-20 minutes depending on the speed, accuracy and density. It should be repeated at home between two to seven times a week. The more frequent the treatment, the better the result. It is a cost-effective instrument can last you several years.
